Purpose: explain what is delivered, partly delivered and still missing.

ExecPlus

VC feature delivery report

As of 13 October 2026 • Based on the current repository and recorded private-demo evidence

A working private analytics demo exists. Commercial launch requirements and broader integrations still need substantial work.

DONE	PARTLY DONE	NOT YET IMPLEMENTED
37	16	11

64 requested feature lines reviewed. 27 still need work: 16 partly delivered + 11 not yet implemented.

VC section	Total	Done	Partly	Not yet
Month 1	17	13	2	2
Improve activation	11	9	1	1
Growth-plan features	11	10	1	0
Commercial readiness	12	4	7	1
Integrations with other solutions	13	1	5	7

What is strongest today

Governed CSV/Excel analytics, dashboards/chat, saved work, basic forecasts, refresh/alerts, audit, support/usage, unusual-value checks, budget decisions and conditional what-if comparisons.

What is most clearly missing

Customer self-signup and production login; PDF/Excel exports; payments and paid plans; live external connectors; embedded dashboards; and complete production operations.

How to read the counts

Done means the basic requested function is implemented and supported by tests in the private-demo scope. Partly done means a subset works, or a needed screen, live setup or acceptance step is unfinished. Not yet means the requested end-to-end capability is absent. Every row states its limits.

We count the VC’s original 64 feature lines, retaining overlaps such as billing and onboarding. Combined requests are not split to inflate the score. These are feature counts, not a percentage of engineering effort or competitor parity. The instruction about predictive/prescriptive claims is assessed separately.

Month 1

Core data analysis works. Four of the original Month 1 requests still need work, including signup, exports and payments.

17 requests • 13 done • 2 partly done • 2 not yet

#	VC request	Status	What works / what is left
1	Company registration and secure login	**Partly done**	Operator-issued, expiring tokens support demo login. Self-service company signup and production authentication are unfinished. [E1]
2	Organization and user workspace	**Done**	Isolated user workspaces and organization/department grouping work. Group membership does not grant access to department data. [E4]
3	Excel and CSV upload	**Done**	CSV and single-sheet Excel upload, validation, retention and profiling work (about 20 MB limit). Multi-sheet workbooks remain unsupported. [E1]
4	Automated column identification	**Done**	Identifies headers, numbers, dates, categories and likely identifier columns. Business-specific meanings still need confirmation. [E1]
5	Data-quality validation	**Done**	Checks missing cells, duplicates, mixed types and invalid dates. Suggested issues do not prove that values are wrong. [E1]
6	Basic data cleaning and mapping	**Done**	Preview/apply basic cleaning and column renaming. Original files, change history and restoration remain available. [E1]
7	Descriptive dashboards	**Done**	Readable typography, chart/table/expand controls and finite motion retain exact evidence. Saved dashboards keep their snapshots. [E2, E13, E17]
8	KPI cards and trend analysis	**Done**	Precise grouped KPI display and observed trends use matching columns. Nulls/signs stay distinct; forecasting is separate. [E2, E17]
9	Natural-language questions	**Done**	Clear questions execute validated queries. Broad goals ask source-specific follow-ups; choices retain context and source/version guards. [E2, E13, E17]
10	AI-generated management summaries	**Done**	AI selects a factual recap from verified calculations. It does not invent figures or provide unrestricted strategic advice. [E2]
11	Filters and drill-down	**Done**	Visible filters and expanded-chart drill-down open matching records with the same access checks. [E2, E13]
12	Save and share analysis	**Done**	Search answers and dashboards in grid/list views. Shared access and original-evidence replay remain enforced. [E2, E13]
13	PDF/Excel export	**Not yet**	PDF and Excel analysis exports are not available yet. They remain planned for Phase 4D. [E8]
14	Usage limits and metering	**Partly done**	General seat, file-size and processing limits plus usage counts exist. Paid-plan quotas and billing-grade metering are missing. [E1]
15	Subscription and payment management	**Not yet**	Subscriptions, checkout, payment processing and billing reconciliation are not implemented. [E8]
16	Customer feedback mechanism	**Done**	In-app ratings and fixed feedback categories work without copying uploaded data. [E3]
17	Finance, sales and inventory templates	**Done**	Finance, sales and inventory templates select compatible KPIs. They require matching columns and do not invent missing formulas. [E2]

Evidence labels [E1-E17] refer to repository sources near the report end.

“Company registration” means software account signup, not legal incorporation.

Improve activation

The upload-first experience and aggregate usage-reporting screens are delivered. Verified live email delivery and billing/upgrades remain unfinished.

11 requests • 9 done • 1 partly done • 1 not yet

#	VC request	Status	What works / what is left
18	Guided data-upload wizard	**Done**	Upload validates files and creates workspace/dataset when needed. Optional step-by-step review previews corrections, saves private notes separately and leaves shared meanings as drafts until full confirmation. [E10, E16]
19	Sample datasets	**Done**	Versioned fictional finance, sales, inventory and city datasets let users explore before uploading their own files. Samples retain reproducible profiles and private originals. [E1]
20	Automated dashboard recommendations	**Done**	Compatible columns and KPIs drive automatic dashboard suggestions. Confirmed meanings and private goals refine study recommendations; users can dismiss suggestions. [E2]
21	Finance, sales, inventory and HR KPI libraries	**Done**	Eight basic KPI definitions cover finance, sales, inventory and HR, with units and column-matching rules. More advanced formulas such as gross margin are unsupported. [E2]
22	Data-quality score	**Done**	Shows a repeatable quality score with reasons for missing values, duplicates and date/type issues. The score does not prove business accuracy. [E1]
23	Saved questions and prompts	**Done**	Search reusable questions and API-created prompts. Saved explanations show sources without a calculation badge. A separate prompt editor remains unavailable. [E2, E13]
24	Scheduled email reports	**Partly done**	Scheduling, unsubscribe, access checks and an email adapter are built and tested. Email is disabled by default; real scheduled delivery has not been verified. [E3]
25	Team invitations	**Done**	Role-based invitation links and seat reservations are tested. Teammates need operator-provided demo accounts; invitation emails are not sent automatically. [E1]
26	Customer usage analytics	**Done**	Managers can view aggregate feature use, activation and weekly return cohorts in the private demo. Incomplete return weeks stay unavailable; individual histories, billing entitlements and churn prediction are excluded. [E12]
27	In-app onboarding	**Done**	In-app next steps track workspace creation, invitations, upload, exploration and saving. Samples and immediate findings help users begin; this is not automated commercial account provisioning. [E3]
28	Billing and plan upgrades	**Not yet**	No billing checkout, paid plans, upgrade/downgrade flow or payment-driven entitlement changes are implemented. These remain Phase 5 work. [E8]

Evidence labels [E1-E17] refer to repository sources near the report end.

Guided upload and optional column-review cards are tested. Private notes and shared drafts save separately; this is not automatic complete business understanding.

Growth-plan features

Basic forecasting, accuracy checks, later-actual comparisons, grounded commentary and searchable audit history now join the delivered team, dashboard, refresh and alert features. Proven root-cause analysis remains open.

11 requests • 10 done • 1 partly done • 0 not yet

#	VC request	Status	What works / what is left
29	Role-based access	**Done**	Owner, admin and member roles control workspace actions. Private studies, conversations and goals retain separate ownership checks; this is the verified private-demo scope. [E4]
30	Multiple workspaces	**Done**	Users can create and switch between isolated workspaces. Organizations can group department workspaces without granting extra access. [E4]
31	Department dashboards	**Done**	Departments use separate workspaces with saved, shareable dashboards containing up to six verified study results. Access is checked for every pinned result. [E4]
32	KPI alerts	**Done**	Users can subscribe to private in-app threshold alerts with cooldowns, delivery states and replayable evidence. Email KPI alerts are not included. [E5]
33	Variance and root-cause analysis	**Partly done**	Shows exact changes over time or between files, plus which groups contributed to a change. It does not prove the business cause. [E5]
34	Basic time-series forecasting	**Done**	Basic daily/monthly forecasts compare simple methods using complete history. Future values are estimates with heuristic error ranges; advanced predictive and prescriptive analytics remain unavailable. [E11]
35	Forecast accuracy measurement	**Done**	Shows held-out MAE, RMSE and eligible percentage errors, plus a last-value benchmark. Chronological validation chooses the method; measured past error does not guarantee future accuracy. [E11]
36	Comparison between actual and forecast	**Done**	Save comparisons with later actual data while preserving the original forecast. Missing actual periods stay pending. Original sources and three exact calculation receipts remain replayable. [E11]
37	Scheduled data refresh	**Done**	Can schedule checks and activation of files already staged in ExecPlus. Users must supply the new file; it does not yet pull fresh data from other systems. [E5]
38	Management commentary	**Done**	Plain-language commentary explains actual changes, forecast estimates, heuristic ranges and observed errors from verified evidence. It does not invent numbers, prove causes or prescribe business actions. [E11]
39	Audit history	**Done**	Searchable audit history shows authorized actions with date, action and resource filters. Private forecast, conversation and other private activity remains hidden from other users, including workspace managers. [E11]

Evidence labels [E1-E17] refer to repository sources near the report end.

Commercial readiness

The private-demo admin console, support workflow and usage/retention reporting are delivered. Broader performance, paid-plan operation and production launch requirements remain open.

12 requests • 4 done • 7 partly done • 1 not yet

#	VC request	Status	What works / what is left
40	Security hardening	**Partly done**	Private access, workspace checks, restricted queries and safe error handling exist. Production login, public HTTPS and independent security/privacy review are unfinished. [E6, E7]
41	Customer-data isolation	**Done**	Current private-demo workflows keep workspace data and private resources separate. Automated cross-workspace tests pass; production security review remains open. [E6, E7]
42	Backup and recovery	**Partly done**	Daily backups and an earlier separate restore test exist. Recovery of the latest version, off-server copies and full production recovery targets still need verification. [E9]
43	Error monitoring	**Partly done**	Health checks, safe failure logs, failed-query counts and job failure states exist. Central error collection, operational alerts and incident monitoring are not implemented. [E6, E8]
44	AI-response evaluation	**Partly done**	Repeatable demo and public-data AI tests exist, with failures retained. Representative customer-data targets and production model/provider comparisons are still unfinished. [E7]
45	Query cost controls	**Partly done**	Processing time, memory, data volume and model-request limits exist. Actual provider spending measurement and money-based spending caps are missing. [E6, E7]
46	Plan-specific usage limits	**Not yet**	General usage limits exist. There are no subscription tiers with their own allowances and automatic enforcement. [E8]
47	Automated onboarding	**Partly done**	Upload setup, samples and guided data review work. Notes default private; shared corrections require explicit drafts/full review. Customer signup and paid-plan onboarding remain absent. [E10, E16]
48	Admin console	**Done**	Explicitly authorized internal staff can inspect workspace metadata, resource counts and job/support health. This private-demo console grants no customer-data access; paid-plan administration and production operations remain separate. [E12]
49	Customer-support workflow	**Done**	Private support requests support replies, assignment, triage, escalation, resolution and reopening with version checks and audit records. This verified private-demo workflow does not automatically attach customer files, prompts or answers. [E12]
50	Performance optimization	**Partly done**	Local overview median improved from 1,934.907 to 241.882 ms on the 100k-per-table fixture; initial JavaScript gzip fell 7.64%. Representative sustained alpha workloads and broader performance acceptance remain open. [E12]
51	Product usage and retention reporting	**Done**	Private-demo dashboards report aggregate activity, feature adoption, activation, completed-week cohort retention and inactivity. Definitions and immature periods are explicit; this is not paid-customer retention measurement or predicted churn. [E12]

Evidence labels [E1-E17] refer to repository sources near the report end.

Integrations with other solutions

Basic what-if comparisons, anomaly checks, budget recommendations and private approval work. Broader analytics and live source connectors remain unfinished.

13 requests • 1 done • 5 partly done • 7 not yet

#	VC request	Status	What works / what is left
52	QuickBooks or Xero integration	**Not yet**	No accounting-system connector is implemented. Files exported from those products can only use the existing supported-file upload flow. [E8]
53	Zoho Books or Odoo integration	**Not yet**	No Zoho Books or Odoo connector, authentication flow or synchronization is implemented. [E8]
54	Google Sheets integration	**Not yet**	No Google Sheets connection or live refresh exists. It is planned as an initial controlled read-only connector. [E8]
55	Database/BigQuery connector	**Not yet**	PostgreSQL currently stores ExecPlus's own metadata. It is not an external customer-data connector. Read-only PostgreSQL and BigQuery connectors are still unbuilt. [E8]
56	Advanced forecasts	**Not yet**	Basic bounded forecasts are now delivered separately. Advanced forecasting methods, representative customer validation and broader decision workflows remain frozen or unimplemented. [E8]
57	Scenario planning	**Partly done**	Private what-if comparisons change one confirmed total or average using declared replacements or percentages. Exact replay and immutable successors work. Multiple-driver models, demand response and scenario uncertainty remain future work. [E15]
58	Anomaly detection	**Partly done**	Finds unusual numerical values with weighted MAD/IQR, exact source replay and private feedback. Seasonal, multivariate, drift and calibrated false-alarm methods remain future work. [E14]
59	Prescriptive recommendations	**Partly done**	Computes bounded single-budget allocations from declared costs, linear benefits and quantity limits. Broader business decision models and causal validation remain unfinished; no action executes. [E14]
60	Recommendation approval workflow	**Done**	Private recommendations support approve, reject and reopen with notes and immutable history. Stale evidence invalidates current approval. Team approval stages and external execution remain outside this basic workflow. [E14]
61	Multi-company consolidation	**Not yet**	Organizations group separate workspaces. They do not combine company accounts, handle currency/period differences or remove inter-company transactions. [E8]
62	API and webhooks	**Partly done**	The app has an authenticated backend API. A customer integration API with scoped keys and signed, retried outgoing webhooks is not implemented. [E8]
63	Embedded dashboards	**Not yet**	Dashboards work inside ExecPlus. Third-party embedding, tenant-bound embed tokens and allowed-host controls are not implemented. [E8]
64	Detailed permissions and audit logs	**Partly done**	Workspace roles, private/shared items and audit records exist. Controls over individual rows/columns and regulated-customer audit requirements remain unfinished. [E8]

Evidence labels [E1-E17] refer to repository sources near the report end.

How we compare with the targets

ExecPlus overlaps with parts of the upload → question → dashboard experience. It has not reached the connected-data breadth or commercial completeness of either target.

This documents capabilities, not hands-on performance or percentage parity. Editions and setup differ. The comparison was reviewed on 5 October 2026; the separate October 6 interface-reference review is recorded in E13.

Area	Polymer	ThoughtSpot	ExecPlus today
Get data in	CSV/Excel upload and a catalog of connectors; API database connections. P1 / P4	Direct CSV chat and database/warehouse connections. T1 / T2	CSV and single-sheet Excel work. Live Google Sheets, accounting and database connections are missing.
Ask questions	PolyAI accepts natural-language questions and suggests visual answers. P2	Spotter supports conversation and follow-ups over governed data. T3 / T9	Supported data/document questions and follow-ups work. Calculations have retained evidence; unsupported methods remain unavailable.
Build dashboards	Advertises AI-created dashboards, suggested insights and reusable templates. P2 / P3	SpotterViz creates and changes dashboards through conversation. T4	Suggested dashboards, basic domain templates and six-pin study boards work. Supported charts are bounded.
Share and export	Documents board sharing/embedding and advertises PDF/PPT reporting. P3 / P4 / P5	Documents PDF/CSV/Excel downloads and embedding tools. T5 / T6	Sharing within authorized workspaces works. PDF/Excel export and third-party dashboard embedding are missing.
Reports and alerts	API documents scheduled board email digests. Threshold alerts were not established by the reviewed sources. P4	Documents scheduled reports and KPI threshold alerts. T7 / T8	In-app KPI alerts work. Email scheduling exists, but live email delivery is not verified.
Access control	Documents workspace/board permissions and vendor-stated encryption controls. P4 / P6	Documents roles and row/column rules for governed queries. T3 / T9	Workspace roles and private/shared items work. Production login, finer data permissions and external security review remain.

Competitive positioning

Conversational analytics, AI dashboards and governed queries are shared capabilities, not proven unique advantages. Our strongest current demonstration is the combination of retained files, reviewed meanings, exact calculations, replayable answers, document citations and visible request activity. A shared evaluation would be needed to claim better quality or speed.

Do not assume every vendor catalog tile is live: Polymer labels some connectors “Coming Soon”. The VC requested accounting and advanced-analysis features are not automatically capabilities of both target products. [P1]

What should happen next

Most unfinished items are already planned or deliberately deferred. “Not yet” does not mean they were forgotten; it means no complete feature is available today.

Workstream	Plain-language outcome	Roadmap
Customer access	Replace operator-issued demo tokens with proper customer signup and production login, then complete the security and privacy review.	Phase 5
Finish the analysis flow	Basic forecasts and accuracy checks are delivered. Next, export verified results as PDF/Excel and preserve the evidence behind each output.	4D next; 4C delivered
Connect live sources	Start with read-only Google Sheets and an approved PostgreSQL source. Add accounting systems and BigQuery only after safe connection/refresh behavior is verified.	4E, then Phase 6
Commercial operation	Internal administration, support and usage reporting are delivered for the private demo. Payments, plans, upgrades, plan-specific limits and real email delivery remain unfinished.	Phase 5
Launch evidence	Representative evaluations, identity/security, recovery and provider privacy must pass. Private-demo evidence does not clear production launch gates.	Phase 5
Advanced decisions	Advanced analytics and external embedding remain gated. Exports, connectors and commercial readiness are unfinished; public deployment still needs reviewed production evidence.	Phase 6: Frozen

A gap in the original Month 1 promise

PDF/Excel exports were placed in Phase 4D, while production account access, payments and paid-plan operation were placed in Phase 5. They remain unfinished against the VC’s Month 1 checklist even though earlier project phases are marked complete.

Eight launch checks are still open

Representative customer examples and labels; retrieval/citation quality; a tested production search provider; backup/restore proof; model quality/speed/cost comparison; hosted-provider privacy; real email delivery; and production identity/security. A successful demo does not close these checks. [E7]

Useful work beyond the VC checklist

- Exact numerical results with original files and replayable calculation evidence.
- Reviewed business meanings, private goals and versioned studies.
- Data-and-document conversation with citations.
- Durable chat requests with real activity, reconnect/resume, cancellation and Simple/Expert views.

These extras are not added to the 64-item score. The optional AI judge was evaluated and rejected; it is not a delivered runtime capability.

Advertising rule

Advertise tested descriptive analytics, basic forecasts and bounded conditional analysis with limitations. Do not claim full predictive or prescriptive analytics.

Evidence and counting method

phase2 baseline: 4efb6da. October 13 refinement is uncommitted; no commit/push.

October 13: 979 distinct backend cases (978 full + final rechecks), 19 frontend tests, 38 browser journeys. Eight VPS users: 16 exact answers/replays, 56 private-thread denials, 24 layouts. Schema 0017, demo only; gates blocked. [E17]

Current evidence outranks old phase labels. Complete applies only to the tested scope.

Counting rules

- One score per original VC line, in order; keep overlapping requests separate.
- Combined requests need all key parts; variance and root cause are different.
- Partial is not done. Delivered features retain each row’s stated limits.
- Checklist counts do not measure effort, cost, time or complete competitor parity.

Official comparison sources

Clickable references for the comparison table. Reviewed 5 October 2026; these are vendor documentation and marketing claims, not independent performance or security validation.

Interpretation limits

Feature availability can vary by edition, version, configuration and permissions. Missing mention on a website is not proof a competitor lacks a feature. We did not assign either vendor a 64-item completion score or infer all accounting/forecasting features from generic “AI analytics” language.

ThoughtSpot permission claims here refer to documented governed-query execution; this is not a blanket assessment of every AI context or memory path. Polymer scheduled emails are documented; threshold-alert support was not established by the pages reviewed.

Suggested positioning is our inference: demonstrate a focused, evidence-backed data-partner workflow, then prove any quality, speed or usability advantage with the same disclosed datasets and tasks for all products.
